I just love to use vp100 all the time. It is worth to have one.
One thing that I do not like is to have 2 different kind of vp100
such as d-link and seronson. Seronson tends to prevent d-link to
use phone number to call seronson. D-link must use ip address
which is very difficult. I think Seronson should be open mind and
let d-link to use phone numbr to call instead of ip address. As
for Relay service itself: It is blessing to have Relay Service. It
is more easier to communication and faster than tty. Sprint Relay
Service did great job, friendly, alot of patience.. Which we do
appreciate with their performance.
I do hope that FCC will look at one of vp100 that should be "Open
Mind". Our dream is to have one vp100 instead of 2 kinds of vp100
which is too much hastle. Thanks for your time..
